

**ABSTRACT OF THE DISCLOSURE**

5       A computer monitor receiver for monitoring children's  
internet usage. The computer monitor receiver includes a video tap  
assembly operationally coupled between a video output and a video  
display device of an information handling system for routing a  
monitoring video signal, a signal transmission assembly for  
10   conditioning the monitoring video signal for transmission through a  
propagation channel, a receiver assembly for conditioning a signal  
received through the propagation channel and a video presentation  
device for displaying a real time substantially identical image of  
the video provided to a user being monitored.
